Knowledge Translation & Mobilization (KTM) Training

Jan 20 (12 – 1pm)
**Patient-Oriented
Research Panel**

ZOOM Virtual Seminar
Meeting ID: 678 3718 1912
Passcode: 131549

Lynne Feehan, PhD, is the Knowledge Translation Lead at the BC SUPPORT Unit. In this role, Lynne supports health researchers to adopt a patient-oriented approach to their work and ensure that findings from patient-oriented research are accessible, understood and used in the real world.

Larry Mróz, PhD, is Research Services Lead with the BC SUPPORT Unit. He helps health researchers work with non-researchers, including patients, to help build their capacity to contribute to the research process. This involves educating and training researchers, patient/family/public partners, and health care providers in patient-oriented research practices.

Tony Lanier is a patient partner and a Co-chair on the Legacy for Airway Health Community Stakeholder Committee. As a member of the CSC, his hope is to bring attention to some of the gaps we've experienced and offer ideas that could potentially be used as medical protocols for lung-related illnesses in BC.

Karen Rideout, PhD, is a Knowledge Translation Specialist with Legacy for Airway Health. She works closely with the Community Stakeholder Committee (a group of people with lived experience of asthma or COPD) who help shape Legacy's work and participate as patient partners. She also facilitates engagement between airway health researchers and patients, community members, or other stakeholders.

Dr. Rebecca Metcalfe is a Postdoctoral Research Fellow at the UBC, Faculty of Pharmaceutical Sciences. She completed her PhD at UBC in Population and Public with an emphasis on decision science in 2021. Dr. Metcalfe works with patients, care providers and other stakeholders to design tools to support individual patient decision-making, and examine how patient preferences can be used to improve healthcare services.
