New Findings on Salt-Dependent Hypertension: Implications for Prevention and Clinical Management

Theodore W. Kurtz, M.D.
Professor of Laboratory Medicine
Director of Chemistry
UCSF Health, Parnassus and China Basin Clinical
Laboratories
University of California, San Francisco

Friday January 13th, 11:30 – 12:30 PM James Hogg Conference Centre (JHCC), Room 103 (ZOOM Meeting ID: 662 2255 0438; passcode: 623137)

Hosted by Pascal Bernatchez

"High salt diets are estimated to account for 30% of cases of hypertension. Despite regulatory and educational efforts to reduce salt consumption, mean population salt intake has not decreased over the past two decades. This presentation will discuss: 1) new findings on the pathogenesis of salt-induced increases in blood pressure and 2) mechanism-based strategies for preventing salt-dependent hypertension that do not depend on reducing salt intake."

This event is a Self-Approved Group Learning Activity as defined by the Maintenance Certification Program of the Royal College of Physicians and Surgeons of Canada
